Subject: RE: Sky Valley Education Center Letter

Hi Jeff-

Thank you for sending this letter to us. I want to point out that the air samples for PCBs are in exceedance of EPA's Exposure Levels for Evaluating PCBs in Indoor School Air (ELEs), not the RfD, as stated in your letter.

The RfD (oral reference dose) is 20 ng PCB/kg body weight per day, and is an estimate of daily oral exposure to the human population including sensitive subgroups that is likely to be without an appreciable risk of harmful effects during a lifetime.

The PCB Exposure Levels for Evaluation in indoor school air were developed to maintain total PCB exposure below the oral reference dose of 20 ng PCB/kg body weight per day.
